

Fig. 12 shows condom 10 being removed from individual package 40 with manufacture's mark 51 to indicate top from bottom of condom 10 to eliminate the prospect of applying second section 24 to the top of penis 18.

Claim

1. A male condom comprising:
 2. a unitary body having a closed end and an open end, the unitary body
 3. having a first elongated generally tubular section adapted to fit
 4. a penis of a male, the first elongated generally tubular section
 5. having the closed end,
 6. a second section extending from the first elongated generally tubular
 7. section, the second section being in a collapsed state that expands to conform to
 8. the size and shape of the scrotum of a male, the second section having the open
 9. end, and resilient means adjacent the open end adapted to hold the condom
 10. securely to a male, the resilient means of one quarter-inch (1/4") thickness adapted
 11. to fit between the scrotum and the torso of a male.
2. The condom of claim 1, wherein the unitary body comprises one
2 of latex rubber, animal skin or a synthetic membrane.
3. The condom of claim 1, wherein the resilient means adjacent the
2 open end allows expansion of the open end of second section over larger
3 size of scrotum and then reduces and grips a smaller size between
4 the scrotum and a torso of a male
4. The condom of claim 3 wherein the resilient means can be
2 configured in one of a round or square shape.
5. The condom of claim 4 wherein the resilient means being
2 adjustable and flexible.
6. The condom of claim 1 wherein the second section is in a collapsed state
2 before being applied to the male penis and expands to exactly fit the scrotum of
3 the male, without any excess or loose condom membrane.
7. The condom of claim 1, wherein the first elongated
2 generally tubular section adapted to fit a penis of a male having a
3 first wall thickness, and the second section extending from the
4 first elongated generally tubular section, the second section
5 being adapted to fit a scrotum of a male, the second section may be
6 the same thickness, thinner, or thicker.

2 8. The condom of claim 7 wherein the second section is
3 preformed with a larger area shaped for a male scrotum, the preformed area is
3 collapsed and expands for an exact fit for a male scrotum.

2 9. The condom of claim 1 wherein the condom can be sized for a
2 multiplicity of sizes for a variety of individual user.

2 10. The condom of claim 1 wherein the condom is packaged flat
2 with the top of the condom marked to distinguish the top of the condom from the
3 bottom (scrotum) side.

2 11. The condom of claim 1 further comprising packaging where at
2 least a multiplicity of individually packaged condoms is provided.

2 12. Packaging for a condom of claim 11 wherein
2 at least a multiplicity of individually packaged condoms are
3 displayed with each packaged condom being placed above and back of a
4 lower condom.

2 13. The condom of claim 12 where the packaging is further comprised of the
2 ability to be opened and closed wherein at least a multiplicity of
3 individually packaged condoms are available for selection.

2 14. A condom for use by a user for the prevention of
2 pregnancy and the prevention of disease, the condom comprising:
3 a body having a closed end and an open end, the body having a first
4 section adapted to fit a penis or a penile facsimile, the
5 first section having the closed end,
6 the second section being in a collapsed state that expands to conform to
7 the size and shape of the scrotum of a male or a
8 genital facsimile, the second section having the open end, and
9 a resilient means (gripper) of one quarter-inch (1/4") thickness near the open end
10 of the second section adapted to hold the condom securely to a user
11 between the scrotum and the torso.

2 15. A condom for use in the prevention of
2 pregnancy and the prevention of disease, the condom comprising:
3 a body having a closed end and an open end, the body having a first
4 section adapted to fit a penis and a penile facsimile, the
5 first section having the closed end,
6 the second section being in a collapsed state that expands to conform to
8 the size and shape of the scrotum of a male and a
7 genital facsimile, the second section having the open end, and
8 a resilient gripper means of one quarter-inch (1/4") thick near the open end of the
9 body adapted to hold the condom securely to a user and adapted to fit
